

### Column-type voltage regulators with turning rollers

allow to realize more powerful regulation machines.

- Power up to 300 kVA
- Single or three phases
- Manual control / Motorized control
- Voltage regulation on demand (with electronic card)
- IP 00 construction
- IP 21 construction

Three phases system with common or independent regulation on each phase (really useful on voltage stabilizers)

- Special construction with double brush arm, for booster-type regulation (phase-inversion).
